

Frankston

Sexual & Reproductive Health Snapshot

The release of Victoria's first ever Sexual and Reproductive Health (SRH) Strategy in 2017 highlighted the need for evidence-based data and research to accurately inform the design and improvement of SRH programs and services. Furthermore, social determinants of health must be considered due to their impact on sexual health behaviours, access and opportunities. This Snapshot will provide insight into the most recently available demographic, fertility, contraception and Sexually Transmitted Infection (STI) data for Frankston.

Frankston is a local government area in the Southern Metropolitan Region (SMR) of Victoria. There are 68,727 (51.2%) women and 65,418 (48.8%) men in the area (ABS 2017).

BIRTH RATES

- In 2016 the number of live births in Frankston was 2,040
- Victorian average was 1,046 (WHV 2018a)
- This was a birth rate of 29.7 per 1,000 females
- Victorian rate: 24.2 per 1,000 (WHV 2018b)
- In 2015, 8.9 per 1,000 young women (15-19 years) had live births
- Victorian rate: 9.5 per 1,000 young women
- SMR rate was 5.1 per 1,000 young women (WHV 2018c).

CONTRACEPTION

- Oral contraceptives are the most popular form of contraception in Australia; 48% of women using a form of contraception use oral contraceptives, compared with only 5% who use an IUD and 5% who use Implanon (Garett et al. 2015)
- Low uptake of Long Acting Reversible Contraception (LARC) remains a significant barrier, women need to be educated and have access to make informed choices.

UNPLANNED PREGNANCY

Victorian specific data on pregnancy outcomes is not collected or published but studies suggest:

- Half (51%) of Australian women have an unplanned pregnancy (Marie Stopes 2008)
- 1 in 3 Australian women will have a termination in their lifetime (Rowe et al. 2015).

*Sources available on the WHISE website

CHLAMYDIA

- Chlamydia is the most commonly diagnosed sexually transmitted infection (Australian Women's Health Network 2012)
- The rate of chlamydia in 2017 was 32.6 per 10,000 women compared to 23 per 10,000 men
- Victorian rate: 19.9 per 10,000 (WHV 2018d)
- Young people aged 15-24 account for 60.2% of all notifications in Frankston (DHHS 2018).

HEPATITIS B

- Hepatitis B is a virus that can cause inflammation of the liver (Melbourne Sexual Health Centre 2017)
- The rate of hepatitis B in 2017 was 0.4 per 10,000 women compared to 0.9 per 10,000 men
- Victorian average: 1.1 per 10,000 females compared to 1 per 10,000 males (WHV 2018e).

CERVICAL SCREENING

- In December 2017, a five-yearly Cervical Screening Test replaced the two-yearly Pap test (Department of Health n.d)
- 54.4% of eligible women (aged 20-69 years) had a Cervical Screen between 2014-2015
- Victorian and SMR average: 60.5% (Victorian Cervical Cytology Registry 2015).

HPV IMMUNISATION

- In 2015, 82.2% of 12 year old girls in Frankston received complete HPV Immunisation (3 doses)
- Victorian coverage rate: 82.8%
- SMR average: 81% (National HPV Vaccination Program Register 2015).

YOUNG PEOPLE & SAFE SEX

- 4.2% of 12-14-year-old students reported that they had sexual intercourse
- 21% of 15-17-year-old students reported that they had sexual intercourse
- 56.7% of these students practiced safe sex by using a condom
- 88.1% of sexually active adolescent females have used contraception to avoid pregnancy (DE&T 2011).

SEXUAL OFFENCES

- Sexual offences are acts, or intent of acts, of a sexual nature against another person, which are non-consensual. This includes rape, indecent assault, sexual offences against children, and other sexual offences.
- In 2017, the rate of sexual offences was 16.1 per 10,000 women in Frankston
- Victorian rate: 13.7 per 10,000 women
- SMR rate: 11.7 per 10,000 women (WHV 2018f).
